SCOPE OF THE CONFERENCE

The focal theme of this international conference entitled, "Advances in Plant and Microbe Research" is to highlight the different strides in plant science and microbe research across the World to have a better comprehension over research development. In recent times, advancement in molecular techniques led to phenomenal development in the areas of genomics, proteomics, recombinant-microbial technology and production of genetically modified crops. This technological revolution has benefitted the industrial and agricultural sectors. Simultaneously, they have opened up new avenues to harvest many useful bioactive compounds from plants and microbes. All human needs including food, shelter, medicine and clean environment are being provided by plants. Microbes are equally important in human life and for human survival. Plants and microbes of unique mangrove ecosystem provide a useful insight and importance. Therefore, there is an urgent need to conserve the microbial and floral biodiversity in the context of human welfare and environment degradation.

This conference brings together the International Scientific Community to exchange information on the recent advances in plant and microbial research that encompasses the following areas and deliberations will provide scope to peep into progressive lines of research in the human welfare.

SUB THEMES OF THE CONFERENCE

1. Biodiversity of mangrove plants and their conservation.
2. Biodiversity of Bacteria, Fungi and Actinomycetes.
3. Mycology, Plant pathology and integrated disease management.
4. Biodiversity of angiosperms, Bio-systematics and Floristics.
5. Ethno-botany, Traditional herbal Medicine and Pharmacognosy.
6. Molecular biology, Cytogenetics and Plant breeding.
